Subject: FNQ-R and KTK-R Class CC Fuse Product Change Notice

In an effort to simplify fuse selection within our UL low voltage fuse portfolio, Bussmann has introduced the Fuses Made Simple™ program. This new program groups the UL low voltage fuse portfolio into four distinct families, based on key performance characteristics, making it easy for users to select the appropriate fuse. As part of the Fuses Made Simple™ program, the FNQ-R and KTK-R Class CC fuses are now part of the Limitron fuse family.

This label change does not affect the form, fit, function or electrical properties of the fuses.

This change will **not** impact the ordering process as all part numbers and amp ratings will continue to be offered.

All part numbers with new labels are direct replacements for the part numbers with old style labels.

Any stock of FNQ-R and KTK-R fuses is still saleable product and should not be returned.

Below are examples of the old and new style labels. The new labels are black in color and have easy to read label information.

#### FNQ-R Class CC Fuse
